Freshtables with Estersteam® Vent

By: American Packaging Corp.

The specially designed Estersteam® valve is pre-applied to roll-stock, lidding and pre-formed pouch specifications and works with frozen, chilled, or ambient products. Under microwave conditions, the valve activates and allows the package to vent, so food is moist and perfectly cooked. This technology is cost effective, running on standard heat-seal equipment with no effect on production efficiency and no capital investment.
